

## **Audrey's Symbols** By JuanCarlos rLora

**In this imaginary narrative each symbol stands for a building block of the universe.**

**Audrey's Symbols** series tells the story of a creator type of being who writes the code for everything in existence and sends it off in time to continue to carry out its duties of becoming and evolving. Like a cell, the code keeps moving and changing and reprogramming itself to make galaxies, planets, atmospheres, plants, animals, etc., which in its own, is like an imaginary microscopic building block of all matter in the linear trajectory of time, as it continues to exist.

In this imaginary story, **Audrey's Symbols** are the program or the code that maintains the existence of life, as eternal as life can be in the universe, all created from the standpoint of an alien child, a little girl named Audrey.

It is proposed that each painting in this series makes a specific element, emotion or entity, such as the sun and the stars, sound, animal world, and so on.
